

Tufts Clinical and Translational Science Institute

Version LTS 12.0.13

Upgrade Date: 03/11/2022

Tufts | CTSI

Tufts Clinical and Translational Science Institute

Overview

Tufts CTSI recently upgraded REDCap to version 12.0.13 The new REDCap features are summarized below. If you have questions about these features, please email informatics@tuftsctsi.org:

- [Multi-Language Management](#)
- [Form Display Logic](#)
- [Protected Email](#)
- [Email Logging](#)
- [@IF Action Tag](#)
- [Event Number](#)
- [Export Blank Values](#)
- [...and many more!](#)

New Feature: Multi-Language Management

- Users can create and configure multiple display languages for their projects for **surveys, data entry forms, alerts, survey invitations, etc.** Users can design instruments and have them be displayed in any language that they have defined and translated so that their survey participants or data entry persons can view the text in their preferred language. This eliminates the need to create multiple instruments or projects to handle multiple languages.

*The **Multi-Language Management** tool (abbreviated as **MLM**) can be found under the Applications drop down*

Important Note: The Multi-Language Management (abbreviated as **MLM**) tool **will not auto-translate** text, but provides tools to such as copy and paste text to make translating text easier.

New Feature: Multi-Language Management

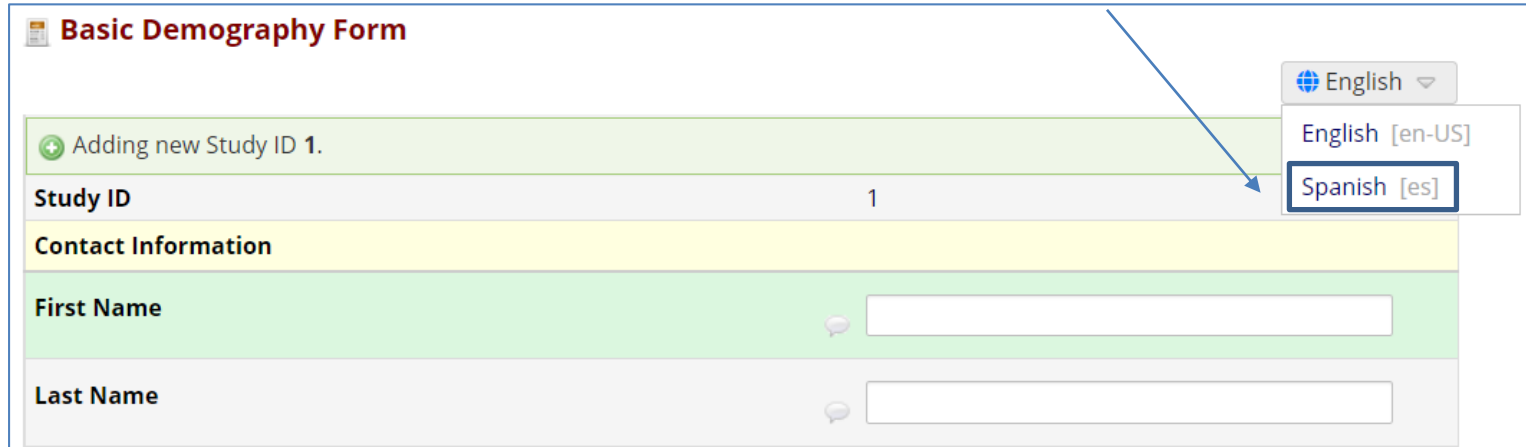

- When entering data on a data entry form or survey, users and participants will be able to choose their language from a drop-down list or buttons on the page to easily switch to their preferred language for the text displayed on the page. This feature allows users to translate **all text related to the data entry process**, both for surveys and for data entry forms. Even various **survey settings and email text** can be translated.
- For users on data entry forms, if a language is selected, that selection is stored in the user's user account settings internally, whereas a survey participant's selected language will be stored in a **cookie in their web browser** as a way to remember their language preference.

*The **language switcher** button that will appear in data forms, surveys and more*

Multi-Language Management: Data Forms

*In this example we start with a data form in **English** but by selecting **Spanish** from the **globe** button...*

Basic Demography Form

Adding new Study ID 1.

Study ID 1

Contact Information

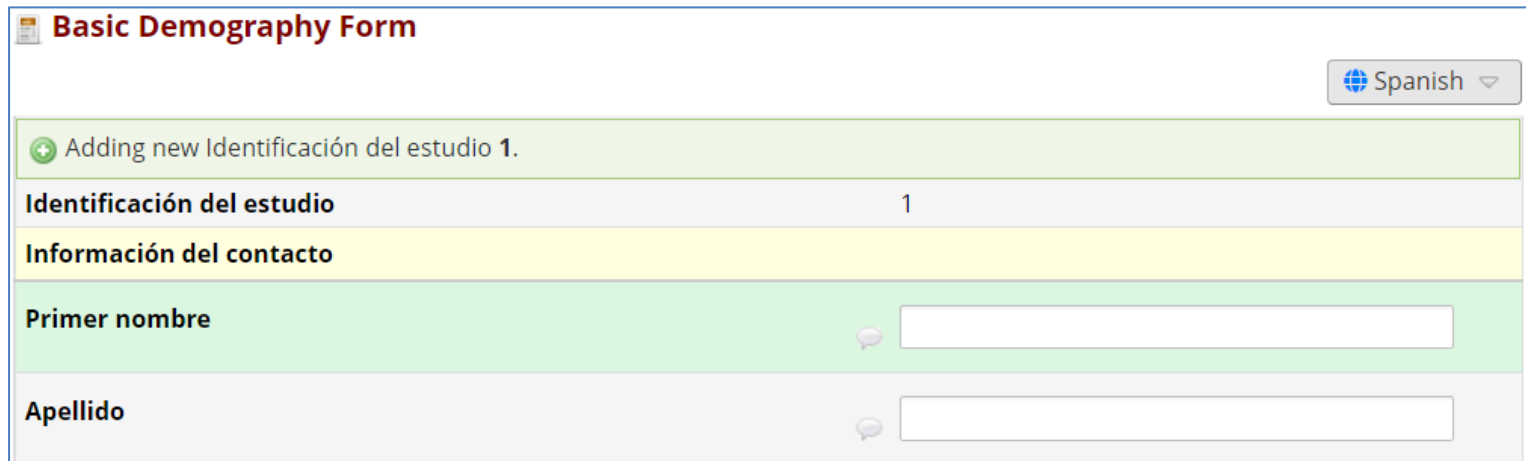

First Name

Last Name

English [en-US]

Spanish [es]

*The form now displays all text in **Spanish** with a simple click of the button!*

Basic Demography Form

Adding new Identificación del estudio 1.

Identificación del estudio 1

Información del contacto

Primer nombre

Apellido

Spanish

Multi-Language Management: Surveys

This also works in **surveys**! Participants can select the **globe** to change their language

Basic Demography Form		AAA English + -
Contact Information		
1) First Name	<input type="text"/>	
2) Last Name	<input type="text"/>	
3) Phone number	<input type="text"/> Include Area Code	

A **survey participants'** language choice will also **be saved via a cookie** if they return later to complete it!

Basic Demography Form		AAA Spanish + -
Información del contacto		
1) Primer nombre	<input type="text"/>	
2) Apellido	<input type="text"/>	
3) Número de teléfono	<input type="text"/> Incluir código de área	

Multi-Language Management: Setup

- Setting up MLM support is very straightforward. First select the **Multi-Language Management** option from the **Applications** menu on the left hand side.

- Upon selection, you will arrive at the home screen for the MLM tool. To start we will add a new language by selecting the **Add a new language** button.

 Languages  Settings —  Save Changes

Manage the available languages in this project using the table and options below by following these steps:

1. Create your default language (i.e., used when creating your fields, instruments, etc.). This will serve as the reference for the other languages.
2. Add other languages that you wish to offer as a translation of the default language.
3. Translate your default text into different languages by clicking the tabs above or the icons to the right of each language below.
4. Test your translations by switching back and forth between languages on your data entry forms and/or surveys. Note that only active languages will be available for selection on those places.
5. Learn how to implement some language-related action tags, such as `@LANGUAGE-SET`, if desired. Learn about them here: [@ Action Tags](#)

 Add a new language

Currently, there are no languages set up in this project.

Multi-Language Management: Setup

- From here we can add our languages. It is strongly recommended to use **language ISO codes** to identify your languages. For example; for **Spanish** we can use the **es** ISO code and set the language display name to **Spanish**. Once your settings are set select the **Add Language** button to save.

Add New Language

Language ID

A unique identifier for this language. It is recommended to use the ISO code, such as 'en' or 'en-US' for English, or 'es' for Spanish. **Use only letters and hyphen.** [View list of ISO codes](#)

Language Display Name

This is the name of the language as shown in the language selectors. This should be entered in its language, such as 'English' or 'Deutsch' (for German).

Sort Override (optional)

If set, this will be used instead of the display name for determining the sort order of languages in language selectors.

An example of what the language home screen will look like when adding English and Spanish

ID	Display Name	Active	Default	Fallback	RTL ?	Actions
en-US	English	<input checked="" type="checkbox"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input type="checkbox"/>	      
es	Spanish	<input type="checkbox"/>	<input type="radio"/>	<input type="radio"/>	<input type="checkbox"/>	      

Multi-Language Management: Setup

- **ID:** The identification name for your language (recommended to use ISO codes.)
- **Display Name:** The display name that will appear when a user clicks the **globe** button to change languages.
- **Active:** Determines if the language is currently active or not in the project.
- **Default:** Determines the **default language** for all data forms, surveys, etc. when using the MLM tool. In the previous example, we set **English** as the default.
- **Fallback:** The language that will be used as a fallback in case certain fields were not translated for the selected language.
- **RTL:** Refers to Right-to-Left. This option can be selected for languages that read RTL such as **Arabic**.

Multi-Language Management: Form Setup

- To set up translations for individual instruments, select the **Forms/Surveys** tab. From here, select the language you want to translate to. You will see a list of your instruments as well as options and settings.

Click a button below to select a language to translate:

* English Spanish

Use this page to manage which instruments will be translated, separately in data entry and survey modes. Furthermore, use it to navigate to the various sub-pages, such as field exclusions (default language only), or translations of field items (labels, etc.), survey settings (title, instructions, etc.) and ASI emails.

Instrument	Data Entry	Survey	Fields	Survey Settings	ASIs
Basic Demography Form	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	Translate	Translate	—

- Data Entry** enables the language to be selected in regular data entry forms. **Survey** allows languages to be selected in surveys. **Fields** button will take you to a page to translate fields individually while the **Survey Settings** button allows you translate form and survey settings such as the survey name.

Multi-Language Management: Translation

- From the **Fields** section you can translate any and all fields to the desired language. The **Default text** section has a **clickable copy button** that allows for easy copy and pasting into the preferred translator tool!

*Fields that **have not been translated** will have a **red** colored box to denote a field with no translation.*

2 ☐ first_name

Section header translation:

- All of these settings and features work the same when viewing the **Survey Settings** translation options.

Data Form and Survey Titles can be translated as well!

Survey Title and Prompts

☒ Translation of the survey title:

Enter translation

Default text:

 Basic Demography Form

Multi-Language Management: Action Tags

- **@LANGUAGE-CURRENT-FORM**
 - Allows you to capture the currently used language in projects where multilingual data is enabled on data entry forms. This can be used on **Text Box, Drop-down Lists or Radio Buttons**.
- **@LANGUAGE-CURRENT-SURVEY**
 - Same as @LANGUAGE-CURRENT-FORM, but works only on survey pages. For multi-page surveys, @LANGUAGE-CURRENT-SURVEY needs to be used on a field of each page where capture of the language is relevant (e.g. for performing branching).
- **@LANGUAGE-FORCE**
 - When used on a field, the form or survey on which the field is located will be rendered in the **specified** (the language must have been set up prior to this).
- **@LANGUAGE-FORCE-FORM**
 - Same as @LANGUAGE-FORCE but is limited to **data entry forms** only.
- **@LANGUAGE-FORCE-SURVEY**
 - Same as @LANGUAGE-FORCE but is limited to **surveys** only.
- **@LANGUAGE-SET**
 - When used on a **Drop-down or Radio Button** field only, this action tag will allow the field's value to control the currently shown language (in the same way as switching the language via the globe button at the top of the page).

New Feature: Form Display Logic

- **Form Display Logic** is an advanced feature that provides a way to use **conditional logic** to disable specific data entry forms that are displayed on the **Record Status Dashboard, Record Home Page, or the form list on the left-hand menu**. You might think of it as 'form-level branching logic'. Form Display Logic can be very useful if you wish to prevent users from entering data on a specific form or event until certain conditions have been met. The forms will still be displayed on the page, but they will be disabled in order to prevent users from accessing them.
- The Form Display Logic **does not impact data imports** but only operates in the data entry user interface to enable/disable forms. Additionally, Form Display Logic is not utilized by the Survey Queue at all but can affect the behavior of the Survey Auto-Continue feature if the checkbox for it is enabled in the setup dialog.

*The **Form Display Logic** setup can be found by clicking the “Form Display Logic” button at the top of the instrument list in the Online Designer.*

A rectangular button with a light gray border and a light gray background. On the left side of the button is a red icon of a crossed-out document. To the right of the icon, the text "Form Display Logic" is written in a red, sans-serif font.

Form Display Logic: Setup

- **Form Display Logic** works very similarly to **branching logic** inside of instruments. Upon arriving at the Form Display Logic screen you will see a list of forms in the left box and a box for **logic** on the right side. From here we can set up our logic.

Condition 1:

Keep the following forms enabled...

Basic Demography Form

First Instrument

(You may select multiple forms by clicking them)

[View list of selected forms](#)

...when the logic below is True.

e.g., [age] > 30 and [sex] = "1"

[How to use this](#)

+ Add another condition

✕ Delete all conditions

Form Display Logic: Setup

- In this example, we set up our **Form Display Logic** to only allow access to the First Instrument form **if the Basic Demography Form** has been completed.

Condition 1:

Keep the following forms enabled...

Basic Demography Form

First Instrument

(You may select multiple forms by clicking them)

[View list of selected forms](#)

...when the logic below is True.

[demographics_complete]='2'

e.g., [age] > 30 and [sex] = "1"

[How to use this](#)

Valid (The determination of validity may not be 100% accurate in all contexts.)

Once we save our settings we can go into the **Record Status Dashboard** and see that **First Instrument** can **not be accessed** at all until the Demography Form is completed.

NEW Study ID 1	
Data Collection Instrument	Status
Basic Demography Form (survey)	<input checked="" type="radio"/>
First Instrument (survey)	<input type="radio"/>

Form Display Logic: Setup

- It is possible to have **multiple conditions** for the Form Display Logic allowing for finer control of what forms are accessible based on the stipulations set in the logic.

The screenshot shows a window titled "Form Display Logic" with a close button in the top right corner. Below the title bar is a note: "When collecting data via survey, any currently hidden forms will be skipped over when the 'Auto-continue to next survey' option is being used."

Condition 1: (indicated by a downward arrow icon and a red close button)

- Keep the following forms enabled...**: A list box containing "Basic Demography Form" and "First Instrument". Below the list box is the text "(You may select multiple forms by clicking them)" and a link "View list of selected forms".
- ...when the logic below is True.**: A text input field containing the logic "[demographics_complete]='2'". Below the field is an example "e.g., [age] > 30 and [sex] = '1'" and a link "How to use this". A green checkmark and the text "Valid (The determination of validity may not be 100% accurate in all contexts.)" are shown below the example.

Condition 2: (indicated by a downward arrow icon and a red close button)

- Keep the following forms enabled...**: A list box containing "Basic Demography Form" and "First Instrument". Below the list box is the text "(You may select multiple forms by clicking them)" and a link "View list of selected forms".
- ...when the logic below is True.**: An empty text input field. Below the field is an example "e.g., [age] > 30 and [sex] = '1'" and a link "How to use this".

At the bottom right of the window are "Save" and "Cancel" buttons.

New Feature: Protected Email Mode

- Users can enable the **Protected Email Mode** on any project on the Project Setup via the **Additional Customization dialog**. This setting **prevents identifiable data (PHI/PII) when marked as such on the variable** from being sent in outgoing emails for alerts, survey invitations, and survey confirmation emails.
- If enabled, **either A) all alerts, survey invitations, and survey confirmation emails or B) those whose email body is attempting to pipe data from Identifier fields will be affected**, in which it will not send the full email text to the recipient but will instead send a **surrogate email containing a link** that leads them to a secure REDCap page to view their original email. If someone is accessing an email in the Protected Email Mode for the first time (or for the first time in the past 30 days), it will send a security code to their inbox that will allow the recipient to view any protected emails for up to 30 days on that same device.

*Protected Email Mode can be found under the **Additional customizations** option under the **Project Setup** tab.*

A rectangular button with a light gray background and a thin blue border. It contains a small blue icon of a document with a pencil, followed by the text "Additional customizations" in a blue sans-serif font.

Protected Email Mode: Setup

- When enabled in a project, user's may specify custom text/HTML to display at top of the sent email and web page where the original email is viewed. This will allow users to also display logos/images pertaining to their project or institution.

The custom text and custom logo options can be adjusted to modify the **secure message** sent to participants.

☒  **Protected Email Mode**

This setting prevents identifying data (PHI/PII) from being sent in outgoing emails for alerts, survey invitations, and survey confirmation emails. If enabled, either A) all alerts, survey invitations, and survey confirmation emails or B) those whose email body is attempting to pipe data from Identifier fields will be affected, in which **it will not send the full email text to the recipient but will instead send a surrogate email containing a link that leads them to a secure REDCap page to view their original email**. If they are accessing an email in the Protected Email Mode for the first time (or in more than a month), it will send a security code to their inbox that will allow the recipient to view any protected emails for up to 30 days on that same device.

1) Should the Protected Email Mode operate on all alerts, survey invitations, and survey confirmation emails, or only on those whose email body is piping data from Identifier fields?

2) Optional custom text to display in the email header and page header seen by the recipient. Default text: *REDCap Secure Messaging*.

3) Optional custom logo to display in the email header and page header seen by the recipient. (Will be displayed above the custom text.)

All alerts, survey invitations, and survey confirmation em: ▼

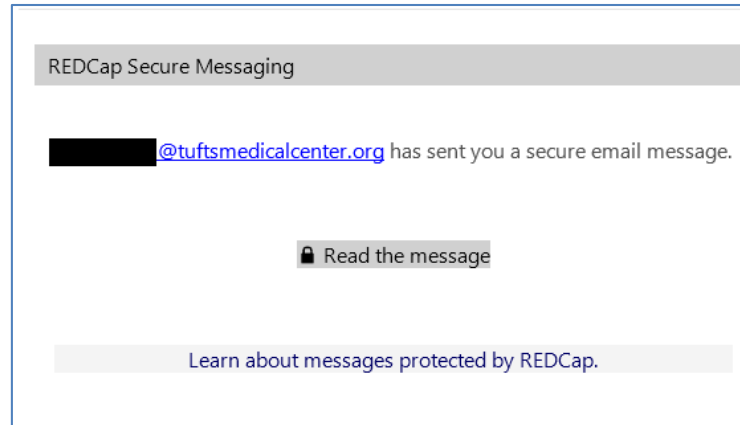

REDCap Secure Messaging

HTML may be used to add images, links, or styled text. For example:
VUMC Study

Upload custom logo:
Choose File No file chosen

Protected Email Mode: Setup

The user will receive a **secure email** containing a message similar to the one below.

Clicking on the email message will take users to a security check screen before they can see the message. A **one time code** will be sent to the same email address.

REDCap Secure Messaging

 Quick security check before viewing your email

Because you have not visited this page before or in a long time, we just sent you a new email containing a security code that will be used to verify your identity here. Please return to your inbox right now to retrieve that security code, and then enter it below. Thanks!

☐ This is a public computer

(Unchecking this checkbox will store a cookie on this device.)

Submit code

New Feature: Email Logging

- This is a new project page that contains a search interface to allow users with User Rights privileges to search and **view ALL outgoing emails** for that project (also includes searching and viewing **of SMS messages if using Twilio services**).
- **Only users with User Rights privileges** in the project may access the page, and additionally they **must opt-in and agree to a disclaimer** before being able to view the page.

*The **Email Logging** tool can be found under the **Applications** sidebar menu.*

The main page for email logging provides various options for finding a specific email.

Search all outgoing emails for this project

Search for in

Type:

Pertaining to a specific record:

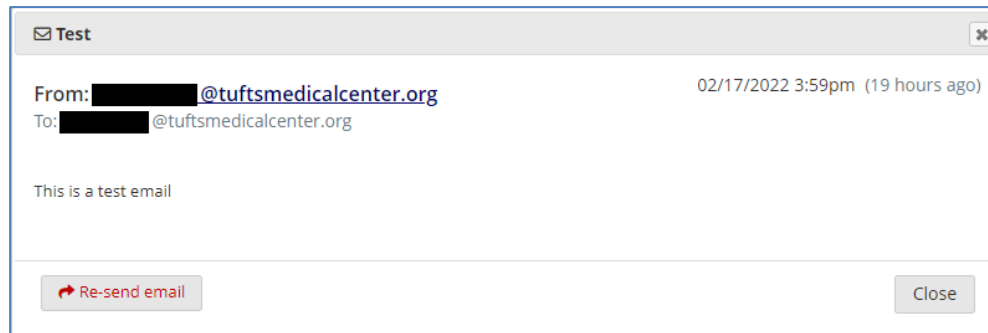

Search within a window of time from to

New Feature: Email Logging

- After inputting your search criteria and clicking on the **search emails** button you will see the results of your search as shown in the example below.

2 matching results			
View msg	Time sent	Record	Summary email content and attributes (click icon on left to view full email)
	02/17/2022 3:59pm	2	From: [REDACTED]@tuftsmedicalcenter.org, To: [REDACTED]@tuftsmedicalcenter.org Subject: Test This is a test email
	02/14/2022 3:24pm	1	From: [REDACTED]@tuftsmedicalcenter.org, To: Subject: Test Test

The **envelope** icon can be clicked on to bring up another window that allows you to see the email that was sent and the option of **re-sending** the email.

New Action Tag: @IF

- Allows various action tags to be set based on conditional logic provided inside an **@IF()** function
 - e.g., **@IF(CONDITION, ACTION TAGS if condition is TRUE, ACTION TAGS if condition is FALSE)**.
- Simply provide a condition using normal logic syntax (similar to branching logic), and it will implement one set of action tags or another based on whether that condition is true or false.

*The **@IF** action tag can be filled out like the example below to trigger another **action tag** based on the conditions set.*

Action Tags / Field Annotation (optional)

```
@IF([yes_no] = '1', @HIDDEN, @HIDECHOICE='3' @READ-ONLY)
```

Learn about [@ Action Tags](#) or [using Field Annotation](#)

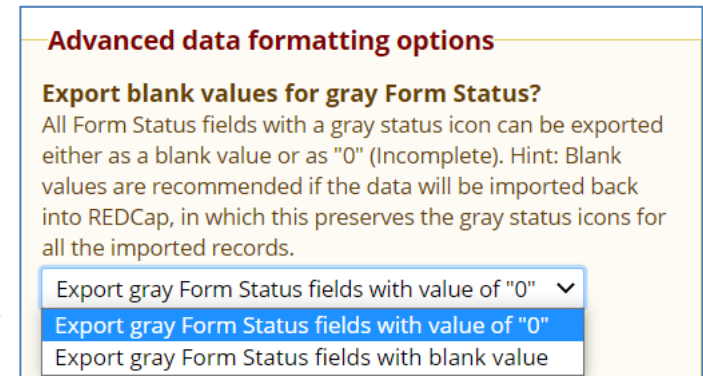

New Smart Variable: Event Number

- New Smart Variable: **[event-number]** - The current event's ordinal number as listed on the Define My Events page that denotes the order of the event within a given arm.
- The **Define My Events** page now displays a new column to display each event's **Event ID number**. Also, the Smart Variable corresponding to each column in the table on the Define My Events page (e.g., [event-number], [event-label]) are displayed in small gray text below the header text in the table to help users more easily learn where the values of those Smart Variables originate.

		Event # [event-number]	Event Label [event-label]	Custom Event Label ⓘ (optional)	Unique event name ⓘ (auto-generated) [event-name]	Event ID (auto-generated, unchangeable) [event-id]
		1	Event 1		event_1_arm_1	33277
		2	Event 2		event_2_arm_1	33278
		3	Event 3		event_3_arm_1	33279
Add new event			<input type="text"/>	<input type="text"/>		
			Descriptive name for this event	Custom Event Label (optional) Example: [visit_date], [weight] kg		

New Data Export Option: Export Blank Values

- All instrument complete status fields having a gray icon can be exported either as a blank value or as "0"/"Incomplete". In previous versions, they could only be exported as "0". By default, they are now exported with a value of "0", but this option can be changed via a drop-down option in the "Advanced data formatting options" section of the data export dialog.
- When exporting the Project XML file with both metadata & data, the option to export gray instrument status as a blank value will be preselected by default, whereas in other data export contexts (e.g. My Reports & Exports page), the option to export them as "0" will be preselected by default.

...and Many More Features!

- When a survey participant **partially completes a survey** that has the **Save & Return Later** feature enabled, instead of sending that email from the system-level "Email Address of REDCap Administrator" the "From" email address of the "Survey partially completed" email will be set to the sender's address from the most recent survey invitation received by the participant.
- A button to open the **Codebook page** as a floating popup window was added inside the **Logic Editor** popup to allow users to easily find and reference fields they want to use in their logic while in the editor.
- The **Online Designer** now denotes whether a field on the instrument contains embedded fields inside its label, choices, notes, etc. by displaying a blue box saying "Contains embedded fields", similar to the green "**Field is embedded elsewhere on page**" boxes for embedded fields themselves. This will provide users with visual cues to know when and where field embedding is occurring.
- New design for the "Help & FAQ" page.
